Tutorial #4 – Resource Pool

CS 587 – Software Project Management Dr. Atef Bader Illinois Institute of Technology

Resource pool project and Sharer project

- Resource pool project The project containing the resources that you want to share.
- **Sharer project** The project that will share resources from another project.

Tasks for both projects

Resource pool project

Step to create a resource pool

- Step 1: Click the sharer project, remember to have the resource pool project also open.
- Step 2: On the Resource Tab, click Resource
 Pool, and then click Share Resources.
- Step 3: Specify the resources and precedence in the pop-up window, and then click OK.
- If your project already had resources entered, the resources from both the projects are combined.

Handle conflicts

Pool takes precedence

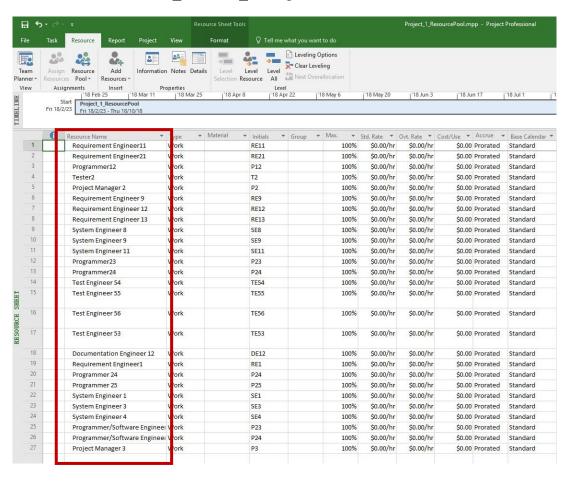

- Resource information in the resource pool project to override any conflicting information from the sharer project (default).
- For example, if the resource named Karen Berg has maximum units of 100% in the sharer project, and 75% in the resource pool project. If the pool takes precedence, then the value of 75% is retained as the maximum units for Karen Berg.

Sharer takes precedence

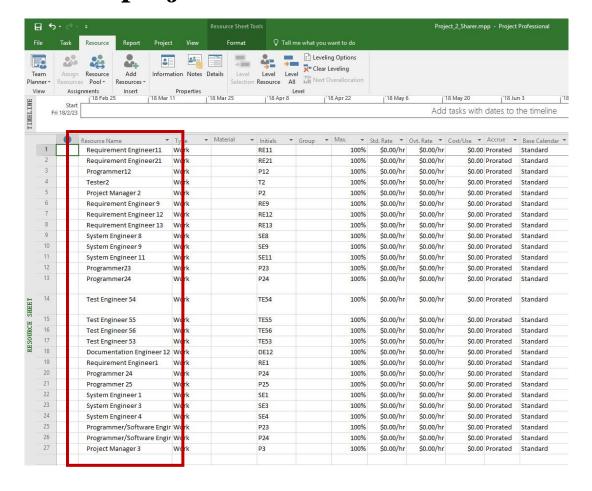

- Resource information in the sharer project to override any conflicting information from the resource pool project.
- For example, if Karen Berg has a standard rate of \$50 in the sharer project, and a standard rate of \$45 in the resource pool project. If sharer takes precedence, the value of \$50 is retained as the standard rate for Karen Berg.

Open the resource pool

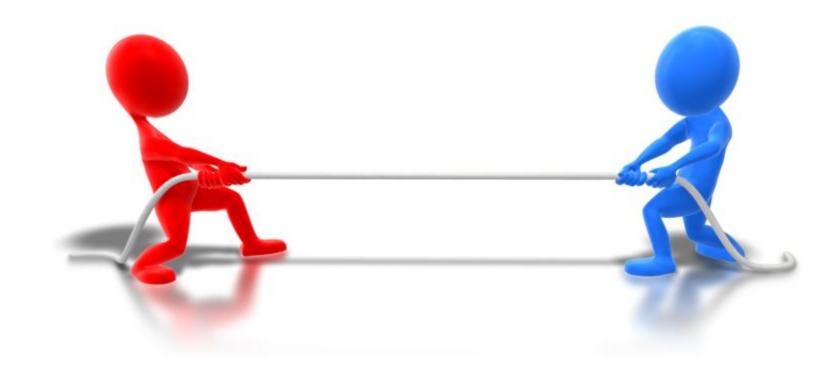

Open the sharer

Handle the conflicts

Conflicts can happen when two or more tasks are done in parallel, and the same resource is assigned to work on all the tasks simultaneously.

Handle the conflicts

How to resolve conflicts?

There are two ways to solve conflicts:

Strategy 1

Allocate 50% (or any %) units of resource to one project and the remaining units to the other project.

Strategy 2

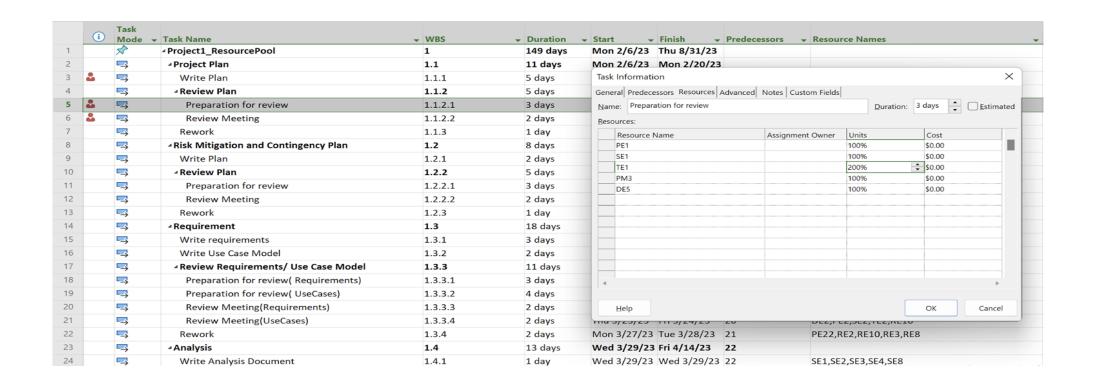

Assign 100% units of resource to both projects, but at different time slots.

Note: The above strategies can be used for solving conflicts within the same project.

Strategy 1

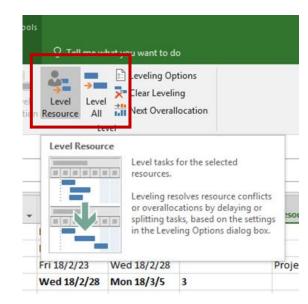

- Step 1: Select the task that has conflicts
- Step 2: Double click the resources
- **Step 3**: Change the percentage

Strategy 2

- Step 1: Select the task that has a conflict.
- Step 2: On the Resource Tab, click on "Level Resource".
- **Step 3:** Select the responsible resources.
- Step 4: Click on "Level now".
